The comment in last office action page 3, regarding the spec is repeated.

The drawing objections on page 3 are repeated. These features are necessary for proper understanding of the use of the invention.

Non-elected claims should be cancelled.

Claims 2, 3, 5-25 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use invention. As based on non-enabling disclosure for reasons in last office action, page 4.

Claims 1 and 4-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arisaka alone or taken in view of Sato, Lockhart, Tanizawa, Biswas Deftari and Andric 114.

The patents are applied as in the last office action. Even without other references it would have been obvious to form the Arisaka power and ground terminals as rectangular members. Use of rectangular members further suggested by Andric at 130, 310. This change produces no new results.

Claims 12-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Freehauf in view of Lockhart, Tanizawa, Lin, Arisaka, Baudoin and Briones.

The patents are applied as in last office action.

The Freehauf sockets are square equivalent to rectangular.

Claims 17-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Freehauf in view of Lockhart, Briones and Baudoin.

Art Unit: 2839

See last office action and above reference to Freehauf sockets.

Claims 4-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Freehauf in view of Arisaka, Andric, '145, Baudouin and Tanizawa.

See last office action.

Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Freehauf in view of Arisaka and Tanizawa.

See last office action.

Claims 17-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lockart in view of Johnson and Bajorek.

See last office action.

Applicant's arguments filed with the amendment have been fully considered but they are not persuasive. The features such as rectangular contacts, central capacitors, etc are disclosed in a schematic manner without any discussion of how the parts interrelate to form an operable device or of why they are arranged as recited. The claimed structures are therefore considered a matter of design producing no new result over reference arrangement of sockets and capacitors. The main feature tied in with results is use of large ground and power contacts and this is taught by Arisaka and Andric 114. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not

Art Unit: 2839

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
